

# safe from the weather ...

notified body #0493 for PPE testing and CE certification

All protective clothing and gloves (PPE) must comply with the fundamental requirements determined by the European Directive 89/686/EEC. As a visible indication of conformity with the fundamental requirements, the producer is obliged to affix the CE-mark on his equipment.

This leaflet will help you select the harmonized product standard your product has to comply with, starting from the intended use or type of risk it asserts to protect against and specifying the material and features the protective garment is made from.

As a notified body (#0493), Centexbel is accredited for the type examination and monitoring of protective clothing and gloves against foul weather conditions.
