

Oldenzaal, April 11 2016

“During the S(P)EEDKITS project we became aware of the project goals and decided to work together to develop a sanitation product which meets the goals as set in the project.

Besides working closely together with the partners in the S(P)EEDKITS project we also worked together with Oxfam in the initial design phase and with ‘Médecins Sans Frontières’ (or ‘Doctors without Borders’) in Geneva in the detailed design engineering.

It the meantime we sold over 250 Flexxotoilets to Doctors without Borders, Oxfam and the Norwegian Red Cross.

So summarized, we were happy to work together to interact with S(P)EEDKITS as they gave interesting feedback on the product in the several design phases and they also helped us with their contacts to commercialize the product.”
